The Problem: Too Much Data, Not Enough Clarity

With more devices, platforms, and systems — every tool is generating alerts and notifications. This often leads to information overload.

Alerts and updates come from everywhere — email, SMS, Telegram, WhatsApp, etc.

Teams struggle to keep up, respond, and make sense of what really matters.

The Solution:

TrackRRM consolidates all the alerts from various systems to provide you with valuable insights with one actionable dashboard — **reducing noise** and **focusing on what matters.**

TrackRRM achieves this using connectors for CSV, JSON and Email.

**Alerts are only valuable
when action is taken.**

01

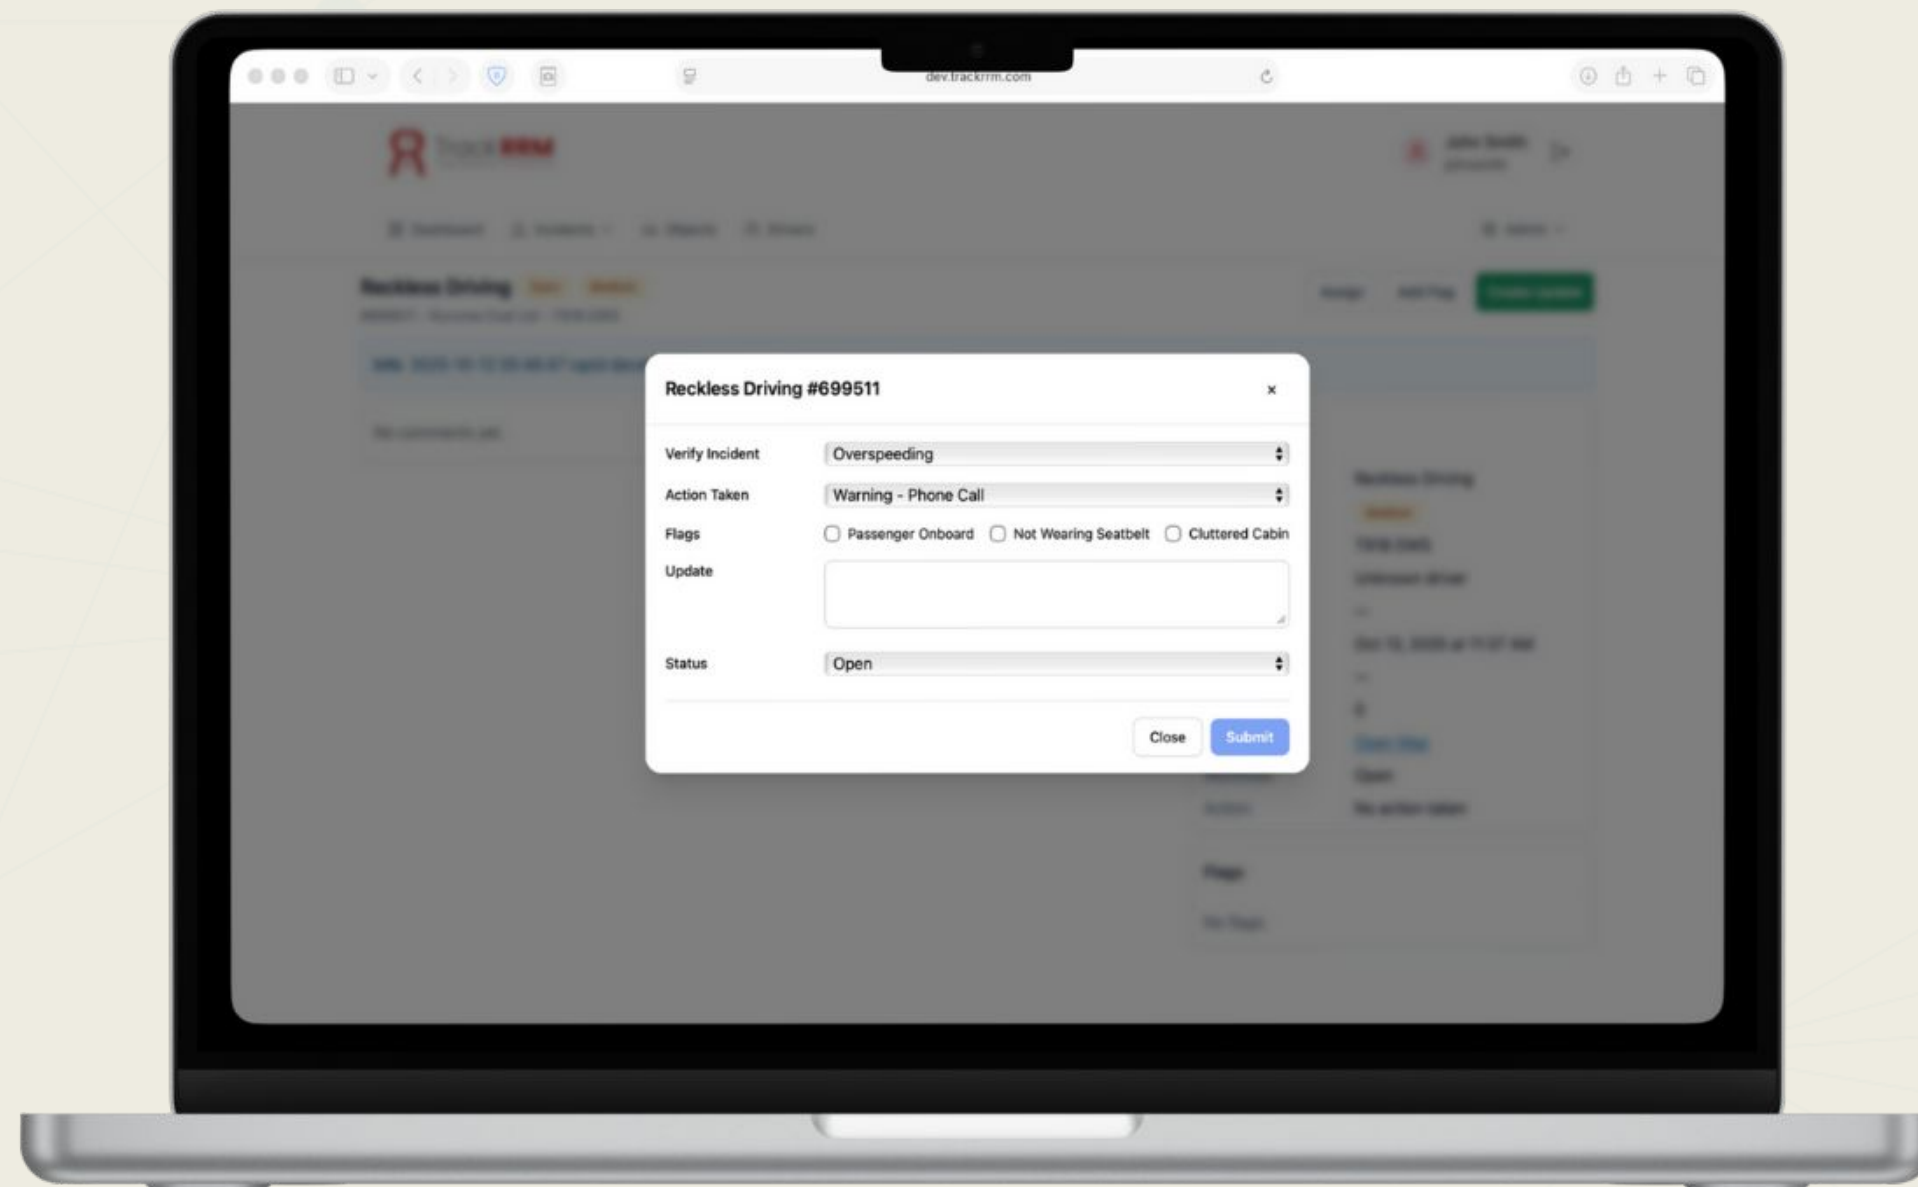

Each alert becomes an incident that needs some action.

02

Your team assigns flags and record actions taken against each incident.

03

You can also record comments and updates for future reference.

Who is TrackRRM for?

TrackRRM is built for Tracking & IoT Integrators — businesses that deploy, manage, and support tracking, telemetry or IoT solutions for clients – as well as end customers in any industry.

System Integrators

- Tracking Service Providers
- Wialon Partners
- Consultants

End Customers

- Fleet Operators
- Logistics Companies
- Mining Companies
- and more.
